Product information

Sweet itch

Sweet Itch, or Summer Eczema, is an allergic reaction to the saliva of biting insects, particularly midges. The symptoms are most often seen in spring, summer and early autumn. It is normal for there to be fluctuations in the severity of symptoms. Season, weather and location are also contributing factors. The individuality of the horse's own immune system and metabolism also play a role.

Application recommendation

CutaSol repair foam cream helps to relieve the skin damage caused by sweet itch

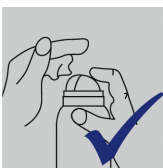

Due to its unique texture the patented foam cream allows an easy and accurate application on the skin. It builds up a breathable, two dimensional protection and promotes recovery of the skin barrier function. Skin permeable lipids absorb into the lipid layer of the dry skin, contribute to the restoration of damaged skin and promote a sustainable improvement of the skin's barrier function. This helps to reduce itching and accelerates the healing process.

Urea increases the water content in the thickened outer layer of dead skin. This softens and soothes, as well as having antibacterial properties.

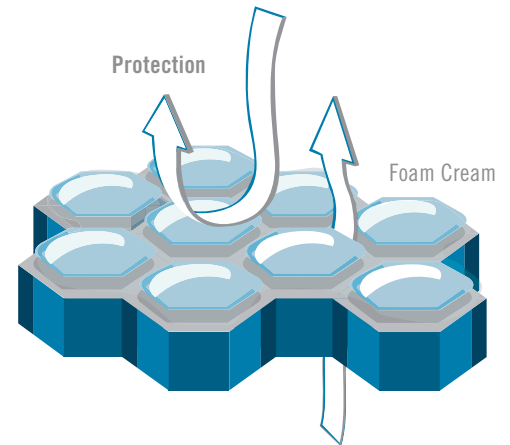

Allantoin protects against dehydration.

Application:

1. Shake the bottle before use
2. Hold the bottle upright and press the nozzle to put some foam cream into the palm of your hand
3. Apply the foam cream to the affected areas of skin and rub in gently

The natural skin function is preserved

Ingredients

Aqua, Decyl Oleate, Octyldodecanol, Urea, Butane, Panthenol, Cetyl Alcohol, Propane, Glycerin, Stearic Acid, Glyceryl Stearate, Caprylic/Capric Triglyceride, Hydrogenated Lecithin, Squalane, Ceramide NP, Allantoin, Butyrospermum Parkii Butter, Potassium Lauroyl Wheat Amino Acids, Palm Glycerides, Sorbitol, Sodium Lauroyl Sarcosinate, Capryloyl Glycine, Pentylene Glycol, Tocopherol, Hydrogenated Palm Glycerides Citrate, Citric Acid.
